Chapter 7 Grassed Waterways

Contents

Page

Introduction 7-1
Requirements for use 7-1
Planning considerations 7-4
Data collection 7-5
Engineering surveys 7-5
Hydrologic investigations 7-6
Designing waterways 7-6
General 7-6
Velocities 7-7
Channel cross section 7-8
Capacity 7-8
Grades 7-8
Stability 7-8
Channel lining 7-8
Appurtenant structures 7-10
Subsurface drains 7-10
Underground outlets 7-10
Stone center drains 7-10
Steps in the design of a waterway 7-10
Example of parabolic waterway design 7-11
Layout and construction 7-13
Layout 7-13
Adjustment and marking 7-13
Construction 7-13
Site preparation 7-13
Excavation 7-13
Equipment 7-13
Appurtenant structures 7-13
Establishment of vegetation 7-13
Maintenance 7-15
General 7-15
Removal of sediment 7-15
Repair work 7-15
Design Procedure for Grassed Waterways 7-63

(EFM Notice IN48, June 1986)

Figures

Page

7-1 Typical waterways 7-2
7-2 Site survey information 7-5
7-3 Typical waterway cross sections 7-9
7-4 Cross section showing perforated grid pavers 7-9
7-5 Waterway with stone center 7-10
7-6 Waterway crossing 7-12
7-7 Woody vegetation on back slope 7-14

Exhibits

7-1 Manning's "n" related to velocity, hydraulic radius, and vegetal retardance 7-17
7-2 Classification of vegetation cover as to degree of retardance 7-18
7-3 Permissible velocities for channels lined with vegetation 7-19
7-4 Parabolic waterway design (retardance D and B) 7-20
7-5 Parabolic waterway design (retardance D and C) 7-34
7-6 Determination of rock size for stone center waterway 7-48
IN 7-7 Trapezoidal Vegetated Channel (Retardance "C" and "D") 7-49
IN 7-8 Parabolic Vegetated Channel (Retardance "C" and "D") 7-69
