

# PRESCRIBED GRAZING EMERGENCY CRP USE - Grazing Only

## Indiana CRP Emergency Grazing (528) Plan - Job Sheet

### PURPOSE

To provide grazing for a limited time period on eligible Conservation Reserve Program (CRP) fields for livestock producers in need of forage for feed due to drought conditions.

**Participants must request authority for emergency grazing of CRP acreage from the Farm Service Agency (FSA) prior to grazing and follow this plan. Participants may not graze and hay the same acreage.**

This plan is limited to the following period:  
**08/02/12** to **11/30/2012** .

This plan is for: **CP10**  
CRP #: **123**  
Farm Number: **1234**  
Tract Number: **1000**  
Field Number(s): **1-5**  
Total Acreage: **100**  
Maximum to be grazed: **75**  
Grazing Producer: **John Brown**  
CRP Owner: **John Brown**

Twenty-five (25) percent of each field or contiguous CRP fields shall be left ungrazed for wildlife use. For this tract, approximately **75** acres will be utilized for grazing and **25** acres will be left for use by wildlife. It would be advantageous for the 25% left for wildlife to be left in a block or a corridor at least **50** feet wide. See attached plan map for areas to be grazed and left for wildlife.

The forage species in this system being managed includes: **Cool-Season Grasses**

The grazing "stop" height will be: **3** inches

This is not the average, but the minimum grazing height allowed for 80% or more of the grazing portion.

*Minimum grazing height has been adjusted some to account for equivalent reduced stocking rate which is easier assessed.*

**Grazing will stop when the minimum grazing heights have been reached, whichever occurs first. Livestock may still be on location, confined, up to an additional ten days if needed to get them loaded and moved.**

Livestock will not be permitted to graze CRP ground that is within 120 feet of any stream, permanent waterbody, or land under easement. Ineligible practices include any practice that is not established; cool season grasses planted last fall and warm season grasses planted in the last 3 years.

Drinking water should be provided to livestock within 1200 feet of any area that is being grazed.

I have reviewed this Conservation Plan modification and agree to follow the specifications.
